

Your Brain **BIG** on Performance

The brain is a critical and amazing organ for your overall health, well-being, and performance. Though it only weighs 2 percent of your total body mass, consider the proportion of resources from your body that it uses to get its job done:

Approximately 20% of
the body's total energy

Approximately 30% of the
body's total oxygen consumption

Approximately 40% of the
body's total glucose consumption

People who have optimized brain health are typically very high functioning, while those who do not tend to struggle with performance.
